

Quant Research Template Guide v4

Appendix to accompany v3.

Appendix A - GitHub SSH with Dev Containers (macOS)

Add this appendix after the GitHub section in the v3 guide.

SSH Config

Recommended ~/.ssh/config:

```
Host github.com
  HostName ssh.github.com
  Port 443
  User git
  IdentityFile ~/.ssh/id_github
  AddKeysToAgent yes
  UseKeychain yes
```

Load key once

Run:

```
ssh-add --apple-use-keychain ~/.ssh/id_github
```

Verify

On host:

```
ssh-add -l
ssh -T git@github.com
```

Inside container

Verify forwarding:

```
echo $SSH_AUTH_SOCK
ssh-add -l
ssh -T git@github.com
git push
```

Troubleshooting

If 'ssh-add -l' shows 'The agent has no identities' inside the container, check the host. If the host agent is empty, reload the key with the command above, then reload the Dev Container.
